Kontaktronowy czujnik położenia tłoka KT65R-5M

Czujnik kontaktronowy ma za zadanie kontrolowanie położenia tłoka siłownika. Magnes umieszczony na tłoku w momencie dojechania do czujnika powoduje złączenie styków czujnika i zwarcie obwodu elektrycznego. Przy współpracy ze sterownikiem mikroprocesorowym daje to możliwość zautomatyzowania procesów produkcyjnych opartych na systemach pneumatycznych.

Siłowniki serii ATEX

Siłowniki ATEX firmy Pneumat System spełniają wszystkie wymogi dyrektywy 94/9/EC dotyczące mechanicznego ryzyka zapłonu w atmosferze wybuchowej. Konstrukcja, użyte materiały oraz rozwiązania techniczne zapobiegają powstawaniu iskier, gromadzeniu ładunków elektrostatycznych oraz ogrzewaniu powierzchni siłowników z powodu tarcia. Dzięki odpowiedniej obróbce pokryw siłownika gwarantowane jest pełne uziemienie wszystkich jego elementów składowych.
